

## To Change the Education

Japanese schooling system have changed greatly from a long time ago. Furthermore education system in Japan has been changing now, too. As an example, education institution added English class to elementary school in earnest. This essay focuses on contemporary change of education curriculum with the new Guidelines for the Course of study.

Changing education system isn't so easy at all. In fact education institution is now confusing. They decided to change the National Center Test for University Admissions, but changing entrance is too difficult to perform in short term. As a result it was only to failure. Examination is related to education curriculum, so I noticed that there are important relation between entrance exam and school curriculum, and we should change school curriculum before changing examination. Then how should we change curriculum?

Then I focused on how the curriculum will be in my school with the new Guidelines for the Course of study. And I take a survey which asks how many classes each subject have is the best for our teachers. I was surprised at the result

of the data. The total number of the class was far from 33 classes which is the total number of classes which we have. I realized the gap between ideal and real in education.

Educational is connected to entrance exam, so if change one of them, we have to change another. Because it affects student's learning. We must think about the amount of effect to change education system.

In the end, the change of education should be performed slowly, but nowadays it has been changing rapidly. For student to get information about exam and education curriculum from now on is important to avoid suffering from new education.
